EDUCATION

Bachelor of Technology in Computer Science, CGPA: 8.2/10.0 <i>KIET Group of Institutions (AKTU)</i>	Aug 2023 – May 2027 <i>Ghaziabad, India</i>
BS in Data Science and Applications — Foundation Level (Completed) <i>Indian Institute of Technology Madras (IIT Madras)</i>	2024 <i>India</i>
Higher Secondary Certificate (Class 12th) <i>Delhi Public School Varanasi - CBSE</i>	2022 <i>India</i>

PROJECTS

Plate Forward - Food Donation Platform <i>MERN, FastAPI, Socket.IO, Scikit-learn, Cloudinary</i> Live Jan 2026 - Built a full-stack platform for surplus food redistribution; integrated role-based JWT auth and real-time Socket.IO notifications to coordinate time-sensitive donation workflows, improving response coordination. - Embedded an ML-powered food wastage prediction model (Python and Scikit-learn, served via FastAPI) that analyzes food item type, quantity, and expiry attributes to flag high-risk donations before listing. - Built an admin analytics dashboard tracking total donations, completion rates, and live user activity. - Implemented Multer + Cloudinary image upload pipeline for donation photo verification; configured protected REST endpoints with Mongoose strict-schema validation enforced across all user roles.	
IntervAI - Interview Preparation Platform <i>Express.js, Javascript, LLM Integration, MongoDB, Zod</i> Live Nov 2025 - Engineered a full-stack AI SaaS platform where users upload a PDF resume and job description to get tailored interview questions, skill-gap insights, and a 0–100 job-fit match score, reducing manual interview prep time. - Enforced structured LLM output by mapping Zod schemas to JSON Schema and binding to Gemini's responseSchema, ensuring type-safe MongoDB writes and eliminating free-form response parsing errors. - Secured the platform with stateless JWT authentication using HTTP-only cookies and a token blacklist strategy; handled resume ingestion via Multer in-memory storage and extracted structured text using pdf-parse. - Designed a RESTful API with protected route middleware and strict Mongoose schema validation; built report history endpoints enabling authenticated users to store, retrieve, and manage all past interview sessions with <200ms average response time.	

INTERNSHIPS

Web Development Intern <i>Edunet Foundation</i>	Aug 2024 – Sep 2024 <i>Remote</i>
- Built a full-stack MERN Restaurant Management App (User Portal Admin Dashboard) with dual-role JWT authentication and RBAC, securing REST API endpoints across customer and admin portals. - Handling 200+ daily active users with modular backend architecture for ease of maintainance.	

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C++ , C, Python
Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, Socket.IO, Zod
Frontend: React.js, HTML5, CSS3, Tailwind CSS
Databases: MongoDB, Mongoose ODM, PostgreSQL, Oracle SQL
AI / Cloud: Scikit-learn, LLM Integration, AWS, Git, GitHub, Vercel, Render, Cloudinary

CERTIFICATIONS

AWS Certified Cloud Practitioner <i>Amazon Web Services</i>	Valid until Dec 2028
Database Programming with SQL <i>Oracle Academy</i>	2025

ACHIEVEMENTS & EXTRACURRICULAR

Departmental Winner – Innotech Technical Event | *KIET Group of Institutions, Ghaziabad*
300+ DSA Problems Solved | *LeetCode & GeeksforGeeks – Data Structures and Algorithms*
